CATALOGUE OF

## BULBS AND FLOWERING ROOTS

Autumn, 1897

*August 18, 1897.*

MANY of the finest Flowers are produced from Bulbs and Bulbous roots, and they would be more widely grown were it not for the fact that they must be planted some time before the bloom appears, and cannot, like flowering plants, be sold in a blooming condition, save in the case of bulbs which have been "forced" into flower in pots, out of their natural time of blooming, and are thereby rendered useless for outdoor planting. All the hardy portion of the class (and the best portion is hardy) must be planted in the autumn, and will bloom in the following spring and summer. It is a common occurrence in the spring to have inquiries and even orders for Hyacinths, Tulips, etc., from friends who have seen the beautiful display of these flowers in parks and private grounds. It is, of course, out of the question to supply them, save in the fall.

A most brilliant and effective display can be had by massing like or contrasting colors in varieties blooming about the same time. We shall be pleased to name proper varieties for this purpose, when desired.

Directions for culture will be found under the various headings.

Our Bulbs are all selected, from the best growers, and are very different from the cheap "case" bulbs offered at very low prices. When parties are unacquainted with the different varieties, we shall be glad to make a suitable selection for any desired purpose. All Bulbs noted as hardy may be planted as late in the fall as the ground can be worked, but October and November are the best months for planting.

Orders for Bulbous Roots can be forwarded to us from August to November, inclusive. Those received before the first of October will be sure of being filled as ordered; after that time the supply of many varieties is frequently exhausted. It is best to order at once on receipt of the Catalogue; the bulbs will be sent in proper time for planting.

Address all orders and remittances to

SINGLE TULIP.

J. M. THORBURN & CO.,  
15 John Street, New York.

# HYACINTHS.

## Directions for Culture.

FOR PLANTING HYACINTHS IN THE OPEN GROUND, the preferable season is October and November, but they can be set out at any later time, as long as the ground is open and the bulbs remain sound.

The best compost for their culture is the following: One-third river or sea sand, one-third well-rotted cow manure, and one-third good garden mould; or, where the soil is naturally light, well-rotted cow manure liberally intermixed is all-sufficient. The beds composed of the above compost should be well dug to a depth of fourteen inches, and raised from two to four inches above the level of the walk. The bulbs should be planted evenly about six inches deep (to the bottom of the bulbs) and from five to six inches apart; if planted at uneven depths they will not bloom at the same time, but irregularly. Care must be taken not to press the earth too firmly around and over the bulbs; some successful gardeners follow the plan of setting each bulb in a handful of clean sand, which insures proper drainage. After planting, rake the bed or border smooth, and after the ground has frozen tolerably hard in early winter, cover with a few inches of dry litter, leaves, evergreen boughs or coarse manure. If this covering be applied before freezing weather, it renders the bulbs liable to the predations of field mice, which may burrow in it.

FOR THE CULTURE OF HYACINTHS IN POTS, prepare the above compost, adding, if possible, a quantity of leaf-mould. The most favorable time for planting is September, October and November. The size of the pot depends on the number of bulbs

planted in a single one; three or four bulbs in a pot of say six inches in diameter have a rich and massive effect; one or two bulbs in each may be planted in proportionately smaller pots—two bulbs in each are very effective, and are generally preferred. In potting, each bulb should remain two-thirds above the surface of the soil; when thus planted, water them well, to imbed the bulbs firmly in the soil, allowing them to remain in this condition one or two days; then bury the pots in the open ground to the depth of six inches for six weeks, in which condition the preparatory root-growth necessary to a vigorous development of their flower-scapes is made. After this period, take up the pots and remove them to a room not heated, but not so cold as to freeze. Being exposed to the light for the first time, they are, of course, very delicate. Care should, therefore, be exercised not to place them in the direct rays of the sun for two or three days. When about ready to flower, bring them to the ordinary living-room, where the warmth will soon cause them to bloom. By so bringing them out, a few at a time, you can secure a succession of beautiful flowers all winter. They will need occasional watering, until they begin to grow, when they should have an abundance of air in mild weather, and plenty of water.

FOR CULTURE IN GLASSES, the bulbs should be placed so that only the base of each touches the water; then place them, for the first ten days, in a dark but cool closet or room, to promote the starting of the roots, after which expose them to the light and air as much as possible; *avoid placing them near gas-light!* The water should be changed as it becomes impure; draw the roots entirely out of the glass, rinse off the fibres in clean water, and wash the inside of the glass well. The water should never be allowed to freeze. When the bulbs are well advanced, give them a soft shower of rain water every day.

Persons unacquainted with the different varieties will do well to leave the selection to us, only specifying in their orders whether the bulbs are wanted for pot, glass or garden culture; we shall take pleasure in sending such varieties as will insure satisfaction.

 The names of our Hyacinths and Tulips are those given to them in Holland, and all our bulbs are true to these names.

## SELECT NAMED HYACINTHS.

The Single-flowered varieties are mostly more effective than the Double ones, and, as a general rule, the former succeed better than the latter in glasses.

The Double varieties are distinguished by an asterisk (\*).

All Single Hyacinths do well in water, and also the double ones marked thus (\*\*).

The sorts printed in **boldface type** are most largely used for bedding.

If ordered by mail, please add 20 cents per dozen for postage.

 No. 6. 100 Fine Named Double and Single Hyacinths, in 25 sorts, \$8.

## EARLY ROMAN HYACINTHS.

Extensively used by florists for forcing, which may be done at a temperature of 60 degrees. Flowers pure white, very fragrant, and each bulb will throw up from three to four spikes. For forcing, three or four bulbs are generally planted in a suitable pot, in good soil (as recommended for other varieties). The pots must be kept in a cool and dark place until filled with roots, when the flower-spikes can be rapidly developed by exposure to light and moderate heat. The blue and rose Roman Hyacinths flower from one to two weeks later than the white variety.

If ordered by mail, add 10 cents per dozen for postage.

SINGLE TULIPS.

## TULIPS.

Most of the varieties named below are equally well adapted either for pot-culture or the flower border. They are readily brought forward for early bloom in the house or conservatory, while, used on the lawn, they group admirably with other varieties of early bulbs, or form beautiful beds when massed in contrasting colors.

Tulips require cultural treatment very similar to Hyacinths, except that the bulbs, being smaller, must not be planted quite so deep.

### EARLY-FLOWERING, OR BEDDING TULIPS.

Admirably adapted for culture in pots, edgings or beds; they flower immediately after the Duc van Thol varieties.

 Six of a kind at dozen rates, 25 at 100 rates.

**If ordered by mail,** add 5 cents per dozen for postage.

**TULIP BEDS.**

It is to be regretted that the gorgeous displays presented by the Tulip beds of our public parks should so seldom be seen on our private lawns. Tulips are so hardy and of such easy culture that failure to obtain satisfactory results is possible only by selecting unsuitable *sorts*. In order to obviate this difficulty, we give the following groups of sorts that bloom at the same time and are of equal height. Any of these groups will form an effective combination. Tulips should be planted 5 or 6 inches apart and about 4 or 5 inches deep to the bottom of the bulb. For culture, the directions given on page 2, for culture of Hyacinths, are applicable. After the Tulips have flowered, the beds can be used for bedding plants, such as Geraniums, etc., to full advantage. Rich soil is necessary.

It is advisable to order as soon as possible after receipt of this Catalogue, as later on in the season we may be sold out of some varieties owing to an unusual demand for them. In that case we shall substitute equally fine sorts of same color and time of bloom.

## GROUPS OF TULIPS THAT WILL FORM EFFECTIVE COMBINATIONS.

### SINGLE TULIPS.

- { Duc van Thol, Scarlet.
- { La Reine.
- { L'Immaculee.
- { Duc van Thol, Scarlet.

## ARUMS.

A class of odd perennial bulbous plants, with peculiar and distinct foliage and flowers. They are of easy culture, requiring rich soil and plenty of water during their growing season. *A. dracunculus* is hardy, and a very curious species; the stalks of the leaves are spotted with brown and purple. The others are not hardy, but should be potted in autumn and kept dormant till spring.

If ordered by mail, add 3 cents each for postage.

## AMARYLLIS.

These bulbs, which are so remarkable for their beautiful flowers, should, most of them, be cultivated indoors, and but moderately watered, unless they show indications of flowering. The soil suitable for their culture is a good loam, with one-fourth part of leaf-mould or pulverized manure and a proportion of sand. Frequent disturbance of the roots is to be avoided.

## BEGONIA, TUBEROUS-ROOTED.

Splendid pot plants for the house or greenhouse; also for bedding in summer. For bedding they should be started in the hotbed in March and April. The hollow end of the bulb should be up and but slightly covered. They should get very little water until the plants are growing.

<b>Volubilis</b> (Twining Hyacinth). Lovely waxy pink flowers.....	10	1 00	7 00
<b>Mixed.</b> All sorts.....	05	30	1 50

BRODIAEA COCCINEA.

**CROCUS.**

For pots and borders. A universal favorite, being one of the earliest flowers seen in the spring. They are neat, dwarf and compact in growth, and the blooms are of bright colors. If planted close—say 2 inches apart—and in close rows, they make a very pretty display immediately after the snow goes off in the spring. Do not disturb for several years.

For flowering in pots, hedge-hogs, baskets, etc., they should be plunged in the open ground for three weeks after planting, precisely in the same manner as directed for hyacinths.

**If ordered by mail,** add 15 cents per 100 for postage.

**HYBRID NAMED CROCUS.**

Composed of the most beautiful varieties; remarkable for richness of color and immense size. These varieties are best for forming letters or designs on the lawn, for which purpose they may be planted without disturbing the grass, by the use of a dibble or narrow trowel. The flowers are produced very early, and the mowing later on will not seriously injure the Crocus bulbs.

**If ordered by mail,** add 25 cents per 100 for postage.

CYCLAMEN GIGANTEUM.

## CROWN IMPERIALS.

A stately-growing plant, with dark green foliage, and flowers of all intermediate shades between yellow and crimson; effective for centers of beds; hardy and permanent, and not so generally planted as they should be. Their flowers are produced quite early in spring, and are very ornamental and decorative in the center of a bed of other bulbous plants. The old dull red variety, while handsome, does not give anything like the effect that the newer sorts do. The double varieties are especially conspicuous and desirable in every respect. They are all the better for being planted in good, rich, well-drained soil; the flowers will be larger and of finer coloring, as well as more enduring.

**If ordered by mail, add 3 cents each for postage.**

CROWN IMPERIAL.

## FREESIA.

The justly popular *Freesias* are greatly prized for the delightful fragrance of their delicately colored flowers, which, when cut, will remain in good condition a long time in water. They are easily grown or forced in a light, sandy soil, in a frame or greenhouse, and are excellent for window culture in winter; one plant will perfume a large room, but not in the persistent manner of a tuberose. The plant has tooth-shaped bulbs and flat, spreading leaves. For the information of all not acquainted with these bulbs, we may say that they are quite small, and produce very large blooms in comparison to their size.

**If ordered by mail, add 3 cts. per dozen for postage.**

***Freesia refracta alba.*** Pure white, and sweet-scented; very largely forced. It is one of the prettiest bulbous plants known. The flowers are 2 inches long, and about the same in width, shaped like miniature gladioli, and in clusters of 6 to 10, on depressed horizontal scapes. The body of the flower is pure white, with lower segments spotted lemon-yellow. There is a peculiar delicacy and beauty about this flower that is all its own; the fragrance is remarkable, and very lasting.

<b><i>Freesia Leichtlinii.</i></b> Creamy white, shading to yellow; a pretty sort; distinct in color.	35	2 00

## GLADIOLUS.

The following varieties are the sorts generally to be had at this season of the year, and they are usually planted in pots in autumn, and require to be kept in a warm room or greenhouse, except those prefixed with an asterisk (\*), which are hardy, and may be planted out; it is best, however, to give them a slight protection. Some varieties are successfully forced.

The French Hybrids, for spring planting, will be in by November. These form a family of bulbs of rare beauty. Every year is now adding varieties of most exquisite tint and shade; and from the time of year during which these bloom, and the long continuance of their flowers in perfection, they become one of the greatest ornaments of the garden at a season when flowers of vivid tints are scarce. They are valuable for bedding.

Named varieties will be found in our General Catalogue.

## IXIAS.

The Named Hybrid Ixias are so beautiful and rich in tints that no lover of bulbs should be without them. They are equally adapted for pots or the open ground, exceedingly free-flowering, and invaluable for cutting. If planted out, they require rather more covering during winter than Hyacinths. In pots their culture is the same as that usually recommended for other bulbs. By reason of their curious forms and strange coloring, the Ixias attract much attention.

IXIAS.

**If ordered by mail,** add 3 cents per dozen or 13 cents per 100 for postage.

	Each	Per doz.	100
<b>Crateroides.</b> Bright crimson	\$0 05	\$0 35	\$1 75

<b>Odorus rugulosus.</b> An improved Campernelle; deep yellow, large, crinkled flowers; very fragrant.....	05	25	1 25
<b>Large Double.</b> Yellow .....	08	75	4 50

## LILIES. (LILIUM.)

They require very little care. The principal thing, indeed, to be attended to is to forbear disturbing them too often. *L. auratum* cannot bear manure; ordinary light soil suits them best. We call particular attention to the *L. speciosum* (Japan Lilies), which are, next to *L. auratum*, the most magnificent species. Lilies should be planted deep, not less than 6 inches, and, although hardy, are benefited by a light covering.

*Most of these Lilies are not ready for shipment until after frost.*

**If ordered by mail,** add 3 cents each for those marked thus (\*); others from 1 to 2 cents each for postage.

	Each	Per doz.
<b>*Atrosanguineum</b> ( <i>Fulgens</i> ). Dark crimson, black spots .....	\$0 20	\$2 00

LILY-OF-THE-VALLEY.

**LILY-OF-THE-VALLEY.**

(CONVALLARIA MAJALIS.)

One of the most beautiful and admired spring-flowering plants, and universally sought for its neat and chaste outline and delicate odor. The growth is close, dwarf and compact, and the plant is hardy and permanent. It is now a most popular plant for forcing, which is easily done by planting the pips in pots, from 6 to 12 in each, watering freely, keeping in a cold cellar, and starting from week to week, to keep up a succession. They generally flower in three or four weeks after planting. They require a considerable amount of heat to start them.

Each Per doz.

**CHINESE SACRED LILY.**

(THE WATER-FAIRY FLOWER.)

**Price, 12 cts. each, \$1.25 per dozen.**

**If ordered by mail,** add 30 cents per dozen for postage.

A variety of the Polyanthus Narcissus, imported from China. The Chinese have the following interesting fable connected with this flower:

"Once upon a time a father left his property to his two sons, with the understanding that it should be equally divided; but the elder son seized all the tillable land and left the younger nothing but an acre covered with rocks and water. The younger son, failing to obtain justice, sat at the water's edge bemoaning his misfortune. A benevolent fairy appeared, and giving him these Narcissus bulbs, told him to drop them into the water. Shortly afterwards their flowers were developed, and the neighbors crowded to see the fairy's gift. In the course of a few years the badly treated brother accumulated a fortune by the rapid increase and sale of his bulb. Then the elder brother, envious of the prosperity of the younger, bought up great numbers of the bulbs—hoping to get a monopoly by getting all of them—at so heavy a price that he was obliged to mortgage his property to procure funds for the purpose. He planted all his land with bulbs, but they soon began to die, as they cannot live long out of water. He was ruined, while his brother, who had bought the mortgage, foreclosed it, and became possessed of the whole estate in time to plant some of the dying bulbs in the watery acre."

The bulbs should be placed from 3 to 6 in a bowl or glass dish of water, which has been partly filled with pebbles, some of which place over the bulbs so as to prevent them from floating. The water should be tepid and changed every two days. Submerge the bulbs entirely, and place in a sunny window in a cool room.

CHINESE SACRED LILY.

NARCISSUS INCOMPARABILIS, "SIR WATKIN." (See page 22.)

## NARCISSUS.

Most useful for furnishing flowers in the early spring months from out-of-doors, or during winter by forcing. They are all hardy, with the exception of *Bulbocodium* and the *Polyanthus* section.

## NERINE.

(GUERNSEY LILY.)

These bulbs should be cultivated in pots, in light, sandy soil, and to promote their flowering, a vigorous growth of leaves must be encouraged in the autumn; the requisites are, warmth enough to excite them, and air to prevent their growing weak. They are very interesting and handsome in flower, and not as well known as they deserve.

If ordered by mail, add 2 cents each for postage.

	Each	Doz.
<b>Crispa.</b> Scarlet; very pretty.....	\$1 00	
<b>Flexuosa.</b> Pretty rose.....	1 00	
<b>Fothergillii major.</b> Nothing can surpass the splendor of this flower. By artificial light the crystalline cells of the petals sparkle like jewels. It flowers very feely...	75	
<b>Japonica</b> (Japan Spider Lily). Purplish red; very beautiful.....	15	\$1 50
<b>Sarniensis</b> (True Guernsey Lily). Crimson. The best known sort.....	25	2 50

## OXALIS.

A very pleasing class of small bulbs, producing vast quantities of brilliant flowers during the autumn and winter months; they are especially desirable for planting in hanging baskets. Their great beauty is not generally known, and we advise our friends to try some of the finer sorts. Pot in September, and remove indoors early in October; keep in moderate temperature.

If ordered by mail, add 5 cents per dozen, or 12 cents per hundred, for postage.

	Each	Per doz.	100
<b>Arborea alba.</b> White.....	\$0 05	\$0 45	\$3 00
<b>Buttercup.</b> A splendid winter-blooming plant, for pot culture. The flowers are pure bright yellow, and produced in great abundance. It is very easily cultivated.....	05	45	3 00
<b>Bowiei.</b> Crimson.....	05	35	2 00
<b>Flava.</b> Golden yellow.....	05	45	3 00
<b>Hirta rosea.</b> Rose.....	05	45	3 00

<b>Versicolor.</b> Crimson and white.....	05	30	1 50
<b>Mixed.</b> .....	05	20	1 00

OXALIS BOWIEI.

## RANUNCULUS.

The main soil for these should be loam or clay, with a good dressing of rotten manure and leaf-mould: if heavy, add a little sand. The soil should be well drained, cool, deep, rich and moist. Plant late in the autumn, claws downward, from 4 to 6 inches apart and 3 inches deep, covering with fine, pulverized soil.

If ordered by mail, add 3 cents per dozen for postage.

### PERSIAN VARIETIES.

	Each	Per doz.	100
<b>Belladonna.</b> Violet spotted.....	\$0 05	\$0 35	\$2 00

<b>Mixed Turban</b> .....	05	20	1 00

RANUNCULUS.

## SCILLAS.

No garden can be complete without these beautiful flowers. *S. Peruviana* requires slight protection; all the others are quite hardy, and may remain in the ground several years.

If ordered by mail, add 5 cts. per doz. for postage, except those marked (\*), which are 2 cts. each.

**Sibirica.** The effect in early spring of this intensely rich blue early-flowering Scilla, contrasting with the snow-white of the Snow-drop and the varied hues of the Crocus, can hardly be over-estimated; are most valuable for permanent edging. 5 cts. each, 20 cts. per doz., 75 cts. per 100.

	Each	Per doz.	100
<b>Bifolia.</b> Blue; hardy.....	\$0 05	\$0 25	\$1 00

" <b>cœrulea.</b> (Blue Cuban Lily).....	15	1 50	

SCILLA SIBIRICA.

## SNOWDROPS.

(*GALANTHUS NIVALIS*.)

Perhaps no spring flower is a more general favorite than the Snowdrop. The earliest-flowering of its varieties is the common single sort, which is also very graceful and beautiful, commencing to bloom before the snow is fairly off the ground in the spring. This is succeeded by the double-flowered variety, with its elegant drooping snow-white blossoms.

If ordered by mail, add 3 cents per dozen, or 25 cents per 100 for postage.

	Per doz.	100	1,000
Single-flowering Snowdrops	\$0 15	\$1 00	\$7 00
Double-flowering Snowdrops	25	1 50	11 00
Giant Snowdrop of Asia Minor ( <i>Galanthus Elwesii</i> )	15	1 00	8 00

## TUBEROSES.

It is not necessary to describe this lovely favorite of our gardens. Its purity of color and rich perfume have gained it great esteem. Our bulbs are certain to flower if properly treated, and are not excelled by any.

If ordered by mail, add 25 cents per dozen extra for postage.

	Each	Per doz.	100
Dwarf Double Pearl	\$0 05	\$0 35	\$1 50
"Albino." Early single white	05	40	2 00
Variegated-leaved Single	05	40	2 00

SNOWDROPS.

## HARDY FLOWERING SEEDS.

For Autumn Sowing.

Many varieties of Flower Seeds, ANNUALS as well as BIENNIALS and PERENNIALS, may be sown in the open ground in the autumn. We give here a list of such as will succeed in this latitude and southward. The plants from autumn-sown seed become larger and more robust, flowering earlier and more numerously than if sown in spring.

	Per pkt.	Per oz.
<b>Acanthus mollis.</b> White flowers; ornamental foliage	\$0 05
